

COGNITIVE SECURITY INSTITUTE

CSC 2026 — APPROVAL BRIEF

For IO Practitioners, PSYOP Planners & Cognitive Warfare Professionals · August 6–7, 2026 · Las Vegas, NV

CSC 2026, BsidesLV, Black Hat, and DefCon: one week, one trip.

The others cover how adversaries attack systems. CSC covers how they attack minds.

300 seats. Two days. Nothing else on the agenda.

WHY THIS CONFERENCE

Technical conferences assume the adversary is targeting infrastructure. CSC assumes they're targeting the analyst, the commander, and the decision cycle. The doctrine, taxonomies, and operational frameworks for cognitive warfare are being written right now — in unclassified research environments, by the practitioners who will be in this room. Two days, 300 people, one subject.

WHAT YOUR ORGANIZATION GAINS

Applied doctrine, not briefings

Frameworks for influence operation detection, cognitive threat modeling, and AI-enabled narrative warfare — applicable to current programs and contract deliverables the following week.

Unclassified — and that's the point

The most operationally actionable cognitive warfare research right now is happening in open environments. CSC aggregates it — accessible to practitioners who need it without classification constraints.

300 people building this field

Researchers, IC analysts, defense professionals, and policymakers — hard-capped at 300. No exhibit floor. The conversations are substantive because the room is small by design.

THE RETURN

Applied frameworks directly usable on current programs. Relationships with the researchers shaping doctrine in this space. A post-attendance brief delivered to your command, division, or program office.

THE ASK

Two days of attendance. The 300-seat cap is not marketing language. Tickets are selling.

August 6–7, 2026

Las Vegas, NV

300 attendees · Hard cap

Co-located: BsidesLV, Black Hat, DefCon

Early-bird pricing ends August 1
