

COGNITIVE SECURITY INSTITUTE

CSC 2026 — APPROVAL BRIEF

For Human Risk Managers & Security Awareness Professionals · August 6–7, 2026 · Las Vegas, NV

CSC 2026, Black Hat, BsidesLV, and DefCon: one week, one trip.

The others cover how adversaries attack systems. CSC covers how they attack minds.

300 seats. Two days. Nothing else on the agenda.

WHY THIS CONFERENCE

Phishing simulations train people to spot a fake email. They don't train them to recognize a synthetic persona running a months-long influence campaign against their organization. That gap is where attacks are happening now — and it's what CSC is built to close. Every other major security conference has one session on this. CSC has nothing else.

WHAT YOUR ORGANIZATION GAINS

Training that sticks

Staff return with concrete frameworks for identifying influence operations, AI-generated deception, and behavioral manipulation — and know how to apply them to your existing SAT program on Monday morning.

Get there before it's required

Cognitive security is entering organizational risk frameworks now. The professionals building fluency today will be the ones advising leadership when it becomes a compliance requirement — not scrambling to catch up.

300 people who do this work

Researchers, behavioral scientists, IC analysts, and security awareness leads — in one room with a hard attendance cap. No exhibit floor. No keynote tourism. The conversations are substantive because the room is small by design.

THE RETURN

Applied frameworks your team can use immediately. Relationships with the researchers defining this field. A post-attendance brief delivered to your leadership or security committee.

THE ASK

Two days of attendance. The 300-seat cap is not marketing language. Tickets are selling.

August 6–7, 2026

Las Vegas, NV

300 attendees · Hard cap

Early-bird pricing ends August 1
